

The aentron 2 kWh storage systems enable the realization of modular and scalable battery solutions. Our operating voltages are from 12 Vdc, 24, Vdc to 900 Vdc. The M-Type modules are ideal for currents up to 60 A.

The following table shows cell capacities grouped in columns, the top half of the table then shows ~800V packs with 192 cells in parallel and the bottom half shows the ~400V packs. You can immediately see that the high capacity 200Ah cell produces a minimum pack capacity ~138kWh at ~800V. The increments in pack capacity are also 138kWh.

These solar batteries are rated to deliver 2 kilo-watt hours kWh per cycle. Check your power bills to find the actual kWh consumption for your home or business. Find the average per day and the peak daily kWh consumption. We have solar battery packs available that provide power storage from 1kWh to more than 100 kWh.

The global capacity in Wh is the same for 2 batteries in serie or two batteries in parallel but when we speak in Ah or mAh it could be confusing. Example : - 2 batteries of 1000 mAh, 1.5 V in series will have a global voltage of 3V and a current of 1000 mA if they are discharged in one hour. Capacity in Ampere-hour of the system will be 1000 mAh ...
