90 percent of the UPS problems is the battery. Batteries also die with time when unused. Pull the batteries out and test them with a multi-meter. I think that unit uses two 12v batteries in series for 24v total. But check each ...

The UPS would just be unable to provide any battery backup in case of power failure. I have learned this is NOT the case and the unit will do very little (or nothing) without charged batteries. So, the question, is there a suitable single server UPS that DOES continue to provide power, even though the batteries are dead?

One morning without warning that my battery was getting low, the unit (UPS BE550es) started beeping like crazy and Powerchute said that the battery was completely dead. I silenced the alarm (SO annoying!) and finished my work on the computer (~2hr) then turned off the computer and left for the day.

Press and hold the power button on the UPS for about 5 seconds. Reconnect the battery and plug the UPS back into the wall outlet. How many years does an APC battery backup last? The lifespan of an APC battery backup depends on various factors like usage and environmental conditions. Typically, the internal battery lasts between 3 to 5 years. It ...

So my first thought was that the battery is dead (APC says the battery has a lifespan of around 3 years) and bought another one (official APC product, ref. APC RBC17). I swapped the batteries and looked at the UPS status: 100% charged, 0s life remaining! So what's the problem? Did I miss anything during the swap? Is my UPS dead?

So my first thought was that the battery is dead (APC says the battery has a lifespan of around 3 years) and bought another one (official APC product, ref. APC RBC17). I swapped the ...

There are basically two modes of failure that I am seeing. One is where the battery indicator shows the batteries as having a charge (80 - 100%), but when the power fails or glitches the ups fails to cut over. The other failure is an occasional F01 error when power is ...
