

Can a banner energy Bull Battery be vented?

If however there is an electrical fault or an imbalance on the charging system some manufacturers prefer to have the battery 'vented' as an extra safety feature and vent pipes are available from RoadProto fit the "Energy Bull" range. The boiling /gassing point of a Banner Energy Bull battery is 14.5V.

How do I install banner battery service tool suite?

Banner Battery Service Tool Suite Installation Guide Follow this procedure to download the latest PC Suite from the website. Please visit the website to download the user manual in other languages. Select your country flag to view the files in your relevant language.

Are banner "Running Bull" AGM batteries maintenance free?

A) Banner "Running Bull" AGM batteries are completely maintenance free. "Energy Bull" batteries don't require maintenance in normal use; however, ideally you should check the electrolyte levels a couple of times during the first year in order to ensure that they are being charged correctly. From then on, it's a good idea to check them once a year.

What does it mean if you can't get inside a battery?

All it actually means is that you cannot get inside the battery if you should need to - for topping up or checking. Battery 3 in the photos above is an SFL type battery and this is probably simply to hide the true nature of the battery and the height of the plates.

What is the boiling point of a banner energy Bull Battery?

The boiling /gassing point of a Banner Energy Bull battery is 14.5V. Q) Is it safe to put wet lead-acid batteries inside a vehicle - under the front seats for example?

Why did we remove the labels from all the batteries?

We have removed the labels from all except the Banner in order to avoid embarrassment. You can clearly see the differences between the plates in the Banner and those in the other batteries: they are bigger, thicker and have glass-mat separators. This is also why "Energy Bull" batteries are usually heavier than others.
