

Li-ion batteries tend to degrade substantially over their expected lifetime of about 500 full discharge cycles. Rapid draining, high temperatures and operation close to 100% capacity speed up the decay. So depends on what you do with it. Hi, The battery of my 9550 was replaced because the swollen batteries case in February of this year (2018).

My laptop would randomly just shut off when the battery was low. When I checked the percentage it shows 15% when I turn my laptop back on. I already checked the power options, and everything is normal there. I was wondering if anyone has any solutions to this. Also, I just notice that my laptop would not charge past 90%.

Je l'ai allumé ce matin avec toujours 15% de batterie et l'après l'avoir verrouillé suite à une veille, il affiche 42% de batterie. J'ai donc pu réaliser la mise à jour. Ce problème...

Overall, losing 15% in a year doesn't seem that bad. I had laptops that lost more capacity in the ...

Li-ion batteries tend to degrade substantially over their expected lifetime of ...

After the most recent software update which had the September security patch, the battery on my OnePlus 12 drops quickly from 15% to 0%. Once the battery reaches 15%, it loses 1% every 10 seconds or so and within a couple of minutes, it ends at 0%.

My HP laptop of 12 months all of a sudden won't charge for more than 15%. I ...

En fait, dès lors que j'arrive au stade des 15% restant de batterie, l'autonomie chute en qq minutes. C'est à dire que je vais arriver à 5% en à peine 10min, voir moins, d'utilisation ou de non utilisation, par exemple. Peu importe si j'active le mode normal ou super économie d'énergie. Les pourcentages restants partent comme des petits pains ! Pour info, je ...

My HP laptop of 12 months all of a sudden won't charge for more than 15%. I tried the diagnostics and it said Battery has issues and needs to be replaced. Laptop is out of warranty. Does battery have factory warranty? What are my options?

My laptop battery percentage stuck at 15% and not increasing at all. What should I do? I have tried troubleshooting but still the same. Please help.

I've owned my HP Pavilion for just under 2 years, and within the past several months, I noticed that the battery wasn't charging past a sliver of a percentage, no matter how long it was plugged in. It always stops at 15% on the dot, and will not budge any higher.

Il reste 10% - 15% de capacit#233; sur la batterie et c'est suffisant en cas de ...

bonjour, ma batterie indique 15% d,usure,est ce beaucoup et peut t,elle me durer encore 1 an d,apres vous.

This may be related to battery charging cycle. But the strange part is if I manage to connect the charger during this period (battery level dropping between 15 to 0%), say I connect the charger at 12% battery level, it still drops to 0% and then it starts the charging. This is like if my battery level drops below 15%, it is going to drop to 0 ...
