

How do I know if a battery has a serial number?

**Battery Name:** The name of your battery. **Manufacture Name:** The name of the company that manufactured the battery. **Serial Number:** The serial number of your battery. This value is displayed only if the battery supports it. **Manufacture Date:** The date that the battery was manufactured. This value is displayed only if the battery supports it.

Where is my battery report?

The location of your Battery-report file will appear as in the image below. Double click the Battery-report.html file and select a browser of your choice as the app to open the file. Now you will see the report. You can print it if you like, or copy the text and post it in a reply in a thread you may have authored about your battery issue.

What is a battery ID?

Null-terminated Unicode string that uniquely identifies the battery. This value can be used to track a specific battery. In the case of smart batteries, this ID would be the concatenation of the manufacturer's name, device name, date of manufacture, and a printable representation of the serial number.

How do I get a battery report on Windows 10?

To invoke the report, hold down the Windows key and tap the X key once. Click on Terminal (Admin) in the menu to open a command terminal window. In the windows, type in `powercfg /batteryreport` and press the enter key. Now open the Windows Explorer and type Battery-report.html in the search box at the upper right and press enter.

How do I generate a battery report?

You can generate a battery report with an array of details. To do this, open a command prompt and type `powercfg /batteryreport`. This command creates a battery report in the form of an HTML file. The file is saved in whatever folder or directory to which the command prompt is pointing.
