

What is fire emergency lighting & evacuation indicator system?

A fire emergency lighting and evacuation indicator system of centralized control type is able to test the lamps, circuits, and the state of the back-up battery of current terminal fire emergency lighting and indicator lamps. When any one of the lamps fails, the control panel should send out a sound-light signal and indicate the fault state.

What is evacuation indicator lamp?

Evacuation indicator lamps indicate the nearest safety exit and light on all the fire emergency illumination lamps rapidly in the building to make sure they are visible continuously in the exit passageway. The system can lead people to escape from the smoke and dangerous area quickly and safely.

How do emergency and exit lights work?

The emergency and exit lights are powered from a separate box. This set up with a separate supply line for the lights, makes it possible to maintain the length of the loop and still add many luminaires.

How are exit and emergency lights commissioned?

The exit and emergency lights are commissioned in the same intuitive EBLWin software used for the fire alarm system. Just as easy as all the other components they are added and programmed. No additional tools, equipment or training are needed.

What is emergency light & how does it work?

Combination or "emergency light" signs perform two functions: illuminating the safety sign pictogram on one or two sides, as well as surfaces and spaces. 'Target light directionally - exactly where you need it' Beam lights with single and multiple movable lamps and optical elements enable you to direct light flow in high-risk interior areas.

How does a fire emergency lamp work?

A fire emergency lamp works independently with its own addressable code, allowing it to follow commands given by the host and report its work status. The lamp's built-in CPU manages the lamp's direction, strobe, and light-off functions for the arrow. It also monitors the lamp's work and fault states in real time.
