2 ???· As demand for the lithium that powers China''s booming electric car industry continues to grow and shortages loom, scientists are exploring ways to extract the metal from abundant but so far ...

Within the battery market itself, the choice of battery chemistries determines demand for materials, driven by the need to balance battery performance and cost. There are currently two broad families of battery chemistries--lithium nickel manganese cobalt oxide (Li-NMC) and lithium iron phosphate (LFP). More manganese-rich battery technologies are also ...

Lithium batteries produced in Dushanbe. Most lithium is commercially produced from either the extraction of lithium-containing salts from underground brine reservoirs or the mining of lithium-containing rock, such as spodumene. Lithium production from clay sources is expected to become commercially viable, though perhaps not until 2022.

Switching from conventional fossil fuel vehicles to electric vehicles (EVs) offers a promising way to reduce carbon emissions, especially if we also decarbonize our electricity sources. This study focuses on Dushanbe, the capital of Tajikistan, where EV adoption is still in its early stages. Understanding local perceptions is crucial for making informed decisions to ...

In order to reduce costs and improve the quality of lithium-ion batteries, a comprehensive quality management concept is proposed in this paper. Goal is the definition of standards for battery production regardless of cell format, production processes and technology.
