Image The Wynwood Labs display space in Miami uses a combination of ceiling-mounted track lights and an art hanging system with integrated lighting to provide outstanding art lighting. Note how the detail of each work is brought out with ...

Display Lighting offers are a large range of spotlights and floodlights to illuminate all types of exhibition displays: Clamp on LED spotlights to illuminate small graphic panels and floor displays. Clamp on LED floodlights to create a uniform wash of illumination over wall and floor displays. Single & 3 Circuit Track Systems are extremely versatile lighting solutions for exhibitions that ...

On the first 2 days, we connected the lights to a fully charged battery and monitored the voltage every hour. The voltage ranged from 13.7 volts in the beginning to 12.3 8 hours later. At the end of the 8 hours, we connected our automatic charger to the battery and allowed it to fully recharge, usually overnight. The system ran perfectly for ...

I use up to 6 lights (LED 7W each) and a fan. I can power that setup for 3 hours on one 25lb wheelchair battery. I rarely use both the lights and the fan so I can power either the lights or the fan for 6 hours per battery. I have four batteries. I have two in the booth and two are in the hotel room charging. The charging is a little ...

If you've ever exhibited at a trade show, you'll know that electricity can come at a high cost. Our new Exhibition Powerpacks are an ideal solution to reduce this cost - they are ...

The Ford F-150 Lightning pickup truck is one of the largest and heaviest EVs on the US market today. It's also not very efficient since it's big and boxy, and it has a huge and heavy battery pack ...
