Why can't I charge my laptop with a removable battery?

The charger isn't connected to the charging port on your PC. This solution usually works when the device (with a removable battery) charges slowly because it is constantly plugged in. Here is how to go about it: Disconnect the charger and remove the battery from the device. Press and hold the power button for a minimum of 30 seconds.

How to fix a bad battery performance?

Disconnect the charger and use it as usual. Avoid charging until the charge is low and do not unplug before the device has charged completely. Maintain this charging ritual, and the issue will not reappear. If however, battery calibration wasn't the issue, go to method 4. As the device ages, the battery performance will keep dropping.

Why is my laptop battery not charging when plugged in?

When the battery discharge rate is higher than the battery charge rate,it seems the battery is not charging even when plugged in. Such an issue is common while playing heavy graphics games. Some heavy graphics games draw more power than the charger is providing to the laptop battery to get charged.

How do I fix a battery problem?

Reinsert the battery, plug in and charge the device. If the charging issue typical to your device is reportedly fixed in a later version, update the BIOS. Here is how: Check the BIOS version /Date info on the right pane of the System Information window. Note down the version. Check if this is indeed the latest available version for your model.
