Why do I have trouble charging my car at a public charging station?

Network outages, malfunctioning units, payment issues, and extreme weather can all lead to trouble at a public charging station. Sometimes you plug your car in to charge and, well, nothing happens. If this happens to you and you don't feel a sense of panic, well, kudos to you. For most of us, this is when we start freaking out.

Why do EV charging stations default to free charging?

Because most EV charging networks use cellular links in their stations, they're subject to the cell-service vagaries we've all suffered. There are two fixes for this. First, the best practice is for any public station to default to free charging if it loses connectivity and can't validate a customer or a payment method.

How to choose a good charging station?

Environmental conditions play a crucial role in charger performance. Extreme temperatures, both hot and cold, can affect charging speeds. Choose charging stations in well-maintained locations to minimize environmental factors that may hinder charging efficiency. In addition, the charging stations themselves must be in good condition.

How do you maintain a charging station?

Clean connectors contribute to efficient charging. Dust, debris, or corrosion on connectors can impede the flow of electricity. Periodically clean connectors using a dry cloth and ensure they are free from any foreign material. Stay proactive by staying informed about software updates for your charging station.

Should I buy a new Charger?

Use a soft brush or toothpick to clean it gently. Additionally, try plugging the charger into a different wall outlet or USB port to eliminate the possibility of a power supply issue. If none of these solutions work, it may be time to consider purchasing a new charger.

Why is my Charger not working?

If your charger is not working, there are a few steps you can take to troubleshoot the issue. First, check the charging cable for any signs of damage or fraying. If it looks worn out, try using a different cable to see if the problem lies there.
