

Maintaining energy storage charging piles at home

Fig. 13 compares the evolution of the energy storage rate during the first charging phase. The energy storage rate q_{sto} per unit pile length is calculated using the equation below : $(3) q_{sto} = m \cdot c_w \cdot (T_{in\ pile} - T_{out\ pile}) / L$ where m is the mass flowrate of the circulating water; c_w is the specific heat capacity of water; L is the length of energy pile; $T_{in\ pile}$ and $T_{out\ pile}$...
