You could test the blocky 9V batteries as well. Here, the used alkaline 9V battery shows a voltage level of 7.2V, which is already considered quite low and almost halfway due for replacement. Refer to the guideline in my comments below. Generally, a battery is considered dead when it has fallen to about 60% of its original as-new voltage.

What does a low volt battery mean?

If the voltage drops to between 12.0 to 12.4 volts, the battery is considered weak, suggesting it may struggle to start the vehicle. A reading below 12.0 volts indicates a bad battery. At this level, the battery is unable to hold a charge effectively and may need replacement.

How do I test a battery?

Easy, you use a battery tester or voltmeter, or as in our case today, a digital multimeter to measure the voltage level. 1. Turn on the digital multimeter and turn the switch to the correct voltage limit. Since we are testing battery voltage levels of not greater than 20V d.c., the switch is set to this limit.
