

What is the function of a photocell on a boiler?

Photocells are a safety feature on a boiler that detects when it is lit. They can become dirty over time and may not be able to tell if the boiler is lit or not. The oil nozzle controls how much oil passes through the burner and can wear out as the boiler ages.

How much does a photocell heater cost?

The price for a photocell heater varies, but Amazon's Choice, Pro-Parts New Replacement PP236 Photocell Heaters, is priced at \$15.99. Get it as soon as Thu, Feb 10.

Which photocell should be used with a 104068-02 Ignition Control Board?

PP236: Photocell Assembly should be used with 104068-02 ignition control boards on oil fired heaters. This photocell is used with heaters that have the hot surface ignitor (glow plug). UNLESS you have the DESA upper tier heaters that have the plastic handle and shroud that covers the fuel tank. That photocell is part #M16656-21
