polymer capacitor line, for example Upcoming models will drive ESR even lower and capacitance even higher to 2m μ F; and 680 μ F, respectively Or looking at the tantalum poly-mer line, new models will offer reductions in ESR in small-er surface mount packages For example, the 3 5x2 8-mm B-Size capacitors will likely see a drop in ESR from 9 to 6m μ F; Our hybrid capacitor line is ...

Aluminum polymer capacitors, like their standard electrolytic counterparts, are a polarized capacitor type based on an aluminum electrode material with an aluminum oxide dielectric, but distinguished from them by their use of a conductive polymer material instead of traditional fluid electrolytes. Relative to standard aluminum electrolytic ...

Hybrid polymer capacitors therefore combine the best of both worlds: the low ESR and high current-carrying capability of polymer capacitors combined with a large effective surface area (and therefore high capacitance) and the low leakage current of wet aluminum electrolytic capacitors. Their compact size, stable capacitance and excellent frequency characteristics are ...
