Try draining battery completely, leave it out of the system for a day, then charge it fully. You may need to replace the battery anyway, even though it works fine when the system is started from AC power. This laptop is rather old and if you still have the original battery that came with it, it may be starting to go out.

I have a Dell D600 laptop. It recently refused to start when I pressed its on button. The button blinked for a few seconds, as did the three symbols to its left, which look like padlocks containing a 9, an A and a ?, respectively.. A couple of times, I removed the battery, waited a few seconds, then put it back in, and tried again.
