

How do I insert a battery?

When you insert batteries, just match the negative end to the spring and the positive end to the flat side. In this case, you'll place the negative, flat sides of the batteries against the springs. Include your email address to get a message when this question is answered.

How do you put a new battery in a laptop?

If you're ready to pop in those fresh batteries, read on! For AA, AAA, C, and D batteries, slide the flat, negative end of the battery against the spring onto the device. Then, push the raised, positive end into the flat side of the compartment. For a 9-Volt battery, hold it at a 30° angle to line it up with the connector snaps.

How do you replace a battery?

Secure the new battery to the bracket and grease the terminals. Place the new battery in the battery tray and secure it to the bracket. Simply reverse the process you used to remove the battery from the bracket. Then, coat each of the terminals in a thin layer of lithium grease to prevent corrosion.

How do you put a battery in a car?

Installing the negative end first allows the battery to slide into the compartment more easily. Just push the flat end of the battery into the spring or lever, flattening it down. Then simply snap the positive, or raised, end into place against the flat side of the compartment.

How do you put a 9 volt battery in a car?

For AA, AAA, C, and D batteries, slide the flat, negative end of the battery against the spring onto the device. Then, push the raised, positive end into the flat side of the compartment. For a 9-Volt battery, hold it at a 30° angle to line it up with the connector snaps. Press it into the connectors and then push it into place.

How do I reinstall a new battery?

Place the new battery in the tray. Fastening it securely using the same screws and/or clamps. Next apply an anti-corrosion spray on the terminals. This is to prevent rust and corrosion. Reattach the positive cable first. Followed by the negative cable. Ensure the connections are tight and secure.
