

How do you remove a corroded battery?

Steps: 1. Place a set of rubber gloves on and some safety glasses 2. Use a small screwdriver to pull the batteries out. The glasses here are very important as it is easy to flick small pieces of the corrosion whilst pulling out the batteries. 3. Sometimes that batteries can be so corroded that they virtually weld themselves to the terminals.

How to remove battery holder?

You might also need to de-solder any wires on them if you got the terminals out of a toy etc. 2 Next, use a small screwdriver to push them out of the battery holder. Just place the tip of the screwdriver into the bottom of the terminal and lift it out of the battery holder.

Where can I find a replacement battery terminal?

In some cases, the corrosion is so bad that you need to replace the terminals inside the battery compartment. One of the easiest places to get these is from old battery holders. You could also grab the terminals out of any old electronic parts. You can also buy the terminals from eBay and I have put a link in the parts section Steps:

How to choose a battery holder?

Steps: 1. The first thing to do is to determine the orientation of the terminals. You need to make sure that the spring section on the terminal will be touching the negative part of the battery and the flat section is touching the positive. 2. Usually you can just look on the bottom of the battery holder and there will be images or the orientation.

How do you fit a battery holder?

Place the terminals into the battery holder grooves and push into place. If they are a little loose then usually the batteries will hold them into place. However, you can slightly bend the terminal and push it back into the grooves which will make the fit a little tighter.

What causes a battery to corrode?

The corrosion is caused by potassium hydroxide which can leak out of alkaline batteries (these are the usual types of batteries you put inside toys etc). All batteries discharge, either through use or just slowly through the production of hydrogen gas which forms pressure in the battery.
