Two solar cells in series can charge one 3.6V Li-ion battery cell. A major advantage using these solar cells compared to silicon cells is that they deliver greater than 4 times higher voltage. Therefore, only one of Spectrolab's multi-junction solar cells is required to generate the same voltage as 5 Si solar cells connected in series .

This 6 volt 3.5-watt solar panel is built with the latest most efficient monocrystalline solar cell. It is laminated by tempered glass, which is durable and robust. This solar panel is great for charging your 3.7-volt DC batteries and ideal for use in off grid applications such as solar lights, mosquito killer, DIY educational kits etc.

Ultra thin and light weight solar cells. Nominal voltage 3.6V. Two of these are needed to power my Pico transmitter. The power reserve from the super caps will be about 5 to 15 seconds when using these. The weight for a single solar cell is 1.44gram. You can mix and match my solar cells and have two different models mounted.
