

"Solar Power" was inspired by "Loaded", a 1990 song from Scottish band Primal Scream (lead singer Bobby Gillespie pictured). After concluding the Melodrama World Tour in November 2018, Lorde retreated from the spotlight and began learning how to play the piano for her then upcoming record. [1] The following year, Lorde began spending time with her friend, American ...

Researchers designed sunglasses with coloured, semitransparent solar cells applied onto lenses that supply a microprocessor and two displays with electric power. This paves the way for other future applications such as the integration of organic solar cells into windows or overhead glazing, researchers said.

Ordinary looking eyewear with solar-cell lenses and integrated sensors and displays provides case study for self-powered wearable electronics

What they've developed are a pair of so-called " solar glasses," which generate electricity by way of solar cells that also double as the glasses" ...

What they've developed are a pair of so-called " solar glasses," which generate electricity by way of solar cells that also double as the glasses" lenses. This electricity can be ...

In the Energy Technology journal, researchers from KIT now present sunglasses with colored, semitransparent solar cells applied onto lenses that supply a microprocessor and two displays with electric power. This paves the way for other future applications such as the integration of organic solar cells into windows or overhead

glazing.

Researchers have designed new "smart" solar sunglasses incorporating semi-transparent organic solar cells that can generate electric power enough to operate devices such as hearing aids. The invention can pave the way for other future applications such as the integration of organic solar cells into windows or overhead glazing, the researchers said.

But sunglasses can now do more than what it was designed to be. Designers Hyun-Joong Kim and Kwang-Seok Jeong have created some conceptual shades that can convert UV rays into electrical energy, which can be use to power small devices. So what material is used for the lenses of these self-energy converting sunglasses?

Researchers at Karlsruhe Institute of Technology have developed a pair of solar sunglasses that generate electricity as you wear them. Skip to main content. Menu Digital Trends Computing AI Mobile ...
