

Solar powered light controller does not light up in winter

How to fix solar light not working?

It's a simple trick to clear out any small glitches that might be messing with your light's performance. Here's all you need to do: Turn off the light, count to a few seconds, and then switch it back on. This quick reset often fixes those pesky little issues and gets your solar light running smoothly again. [How to Fix Solar Lights Not Working?](#)

Why are my solar lights not working?

While solar lighting is a fantastic option for your outdoor areas, you'll likely run into an issue or two with this technology at some stage. Here are five common reasons why your solar lights aren't working: Battery needs replacing. The pull tab for the battery. Dirty solar panel. Faulty or damaged sensor. Water ingress/intrusion.

Can a solar light sensor switch on at night?

The solar light sensor reacts to darkness, allowing it to go off in the daytime and switch on at night. But this won't be possible with a faulty sensor unless you do it by bypassing the sensor manually, and nobody has enough time to do that. If you have an ineffective sensor, it won't differentiate between night and day.

Do solar lights work in winter?

Many people ask if our lights work in winter having had a bad experience in the past, normally with cheap budget type lights. All solar lights use rechargeable batteries, but with a good set of Lithium Ion batteries costing upwards of \$10, very cheap solar lights are likely to perform poorly. [Why are my solar lights not on dusk till dawn in winter?](#)

What if my solar light sensor is faulty?

If your solar light sensor is faulty, you can always replace it as long as the rest of the lamp is in good condition. The good thing is that some manufacturers offer replacements, so you can reach out to the manufacturer of your solar lights to repair the sensors.

Do solar lights work without sun?

As above, solar lights still work in the shade without sun but for the best performance, no matter the time of year, solar panels should be angled directly at the sun with nothing in the way to diffuse the light. [Can you use rechargeable batteries in solar lights?](#)

While solar lights are resistant to the ever-changing weather, they can encounter issues or run into some trouble, which is common to many users. But that doesn't mean their functionality is entirely dead. Here we've identified some of the major reasons your solar lights suddenly stopped working and tips to get them back up and working.

To fix solar lights that aren't working, ensure they receive sufficient sunlight, replace batteries every three years, consider replacing faulty sensors, regularly clean the solar panels, avoid shading from objects or trees, and ensure the panels are not obstructed by glass.

We recommend turning them off, if possible, ensuring they're positioned to receive sunlight for as long as possible, and allowing them to charge for 36-48 hours prior to turning them on. Whilst solar lights may have some residual charge when they first arrive, the battery is unlikely to be full.
