

What happens if I turn off battery optimization?

If you turn off battery optimization for an app in your Pixel Phone, that app can run more even when adaptive battery is on. This can use more battery than needed. To manage battery usage, go to Apps > See all apps > choose your app > Battery > Manage battery usage > Optimized > find the app and tap on it.

How do I view Battery optimisation settings?

Based on this answer from Reddit, the following steps allow to view the battery optimisation settings for individual apps: Settings -> Apps -> App battery usage -> [APP]-> Allow background usage (tap the text, not the toggle) [APP] being the app you want to verify the battery optimisation's setting. You must log in to answer this question.

Why is Android not optimized?

Optimization is not performed because we do not know how to fulfill the conditions necessary for its launch. The consequence of this is the accelerated discharge of the phone. You can often watch how the Android system consumes energy more than other applications. This is the result of not allowing the system to optimize.

Why does a battery drain a phone if it's not optimized?

The answer is not correct. It only starts under special conditions. Lack of this optimization will drain the battery. Optimization is not performed because we do not know how to fulfill the conditions necessary for its launch. The consequence of this is the accelerated discharge of the phone.

How do I force the optimization to run?

Be that as it may, you have the option to force the optimization to run. For users with root: If you don't have root, use ADB. Connect the phone to the device, make sure it is available (enable USB debugging and USB debugging secure settings). Open CMD ADB platform-tools and write command one by one:

Does MIUI optimization improve battery?

#10 I turned off MIUI optimization in Developer Option, it seems that battery has improved.

I just installed lineageOS with microG and during the post-install check-up of microG I accidentally activated "System -> Battery optimization ignored" in the microG ...

Learn how to handle battery optimization issues on Android, ensuring your app's continuous background operation despite constraints. This post provides a detailed approach, ...

@milosmns They decided that the only way my app will be reinstated is if I remove the REQUEST_IGNORE_BATTERY_OPTIMIZATIONS permission, even though I explained that according to the docs I had every right to request it. I decided to remove it so that I won't risk permanent deletion of the app.

```
if (!hasIgnored) {
    Intent intent = new
    Intent(Settings.ACTION_REQUEST_IGNORE_BATTERY_OPTIMIZATIONS);
    intent.setData(Uri.parse("&quot;package:&quot;" + activity.getPackageName()));
    if (intent.resolveActivity(getPackageManager()) != null) { startActivity(intent); } } else { ...
```

The battery optimization is disabled for this app, but every day it's being killed by the system. It seems memory optimization is what does it. I've tried add this app into ignore list ...

I just installed lineageOS with microG and during the post-install check-up of microG I accidentally activated "System -> Battery optimization ignored" in the microG settings. Unfortunately I cannot deactivate it any more. Any advice how to accomplish this? Thnaks!

I was browsing the docs a while and came accross references to ignoring battery omptimisations. The things I'm reffering to are as follows: What are these optimisations specifically and where are they detailed in the

official Android Developers site?

They aren't just reset after every restart / upgrade but even without running any update or restarting. One problem that results from this beyond having to change the settings after update is that firewall apps can get disabled. After every update the NetGuard firewall was disabled which may be caused by this or be a separate issue.

Based on this answer from Reddit, the following steps allow to view the battery optimisation settings for individual apps: Settings -> Apps -> App battery usage -> [\$APP] -> Allow background usage (tap the text, not the toggle)

I use the following code to request ignore battery optimization for an app. I can successfully request the permission. I am able to detect if the app is on the system's whitelist ...
