

The latest price list of Black Gold after-sales batteries

Why is black mass important in lithium ion battery recycling?

As investment in lithium ion battery recycling capacity increases, the pricing and availability of black mass is becoming increasingly important. This valuable material, a mix of crushed metals produced by shredding battery scrap, is often exported to Asia from the West.

Is black mass recycling the future of battery metals?

Platts says it has observed growing interest in black mass recycling, which is expected to play an integral role in future battery metals supply. The processing of black mass has grown in importance as a supplement to virgin mined material and as a means of reducing the carbon footprint of the battery supply chain.

Is S&P launching a black mass battery price offering?

Anna Crowley, global head of Metals Pricing, S&P Global Commodity Insights, adds, "We're pleased to be following on our Black Mass offerings launched earlier this year in Asia and Europe with a Western price offering for the U.S., further filling out the global battery raw materials supply chain."

Is Black Mass the New Black Gold?

Theoretically, that is, because it's proven really difficult for most battery recyclers to practically recycle and upcycle the valuable cathode materials found in black mass. However, for those who can, black mass might just be the new "black gold."

Can RecycLiCo turn black mass into Black Gold?

RecycLiCo is among the first to be able to turn that black mass into "black gold," recovering almost all of the cathode materials within black mass and upcycling them into battery-grade precursor cathode active material (pCAM) and lithium that can be used again in the battery manufacturing process. And batteries made from those recovered materials?

Are battery recycling companies 'recyclers'?

"There is a nuance in battery recycling where companies that shred end-of-life batteries and companies, like RecycLiCo, that recover the valuable materials locked within the black mass - are both referred to as 'recyclers,'" explains RecycLiCo Battery Materials CEO and Director, Zarko Meseldzija.
