The motherboard has no battery and cannot recognize the system disk

Why is my PC not booting to BIOS?

Commonly the battery is behind/under the back end of the gpu, requiring gpu removal just to get at the battery. The pc will pass post, booting to bios in order for the user to reset the RTC (real time clock) and saving of bios settings, at which point the pc will reset which does not require psu shutdown, and the pc will then finish booting to OS.

Why is my laptop battery not working?

In many cases,a poor connection between the battery and motherboardis the root cause of this issue. To see if that's the problem for you,you need to reinstall your battery. Here is how to do it: 1) Turn off your computer. 2) Remove your battery and AC adapter. 3) Reconnect your battery and AC adapter to your computer.

How do I know if my laptop has no battery?

And when users find that no battery is detected,things may go awfully wrong. The No battery is detected message is seen when you hover the cursor over the Battery icon in the right corner of the Taskbar. Clicking on this icon will give the message,No battery present.

What does no battery is detected mean?

When you come across the No battery is detected message,it means that the computer cannot identify oneand is subsequently not drawing power from the battery. But it does in no way imply that there's no battery connected. Most of the time,a fully functional battery is connected but isn't detected due to software or hardware issues.

Why is there no battery detected in Windows 10?
