

## The power adapter has a battery

You can try a system reset in the off chance it may correct the problem. Disconnect the battery and unplug the adapter. Press and hold down the power button for 30 seconds. Then reconnect everything and see if the adapter is now correctly identified. And if you have another Dell adapter available try it to see if the problem is corrected.

Remove the battery. See the User Manual of the laptop for instructions on how to remove the battery. If your Dell laptop has a nonremovable battery, skip this section. Press and hold the power button for 30 seconds to drain residual power from the laptop. Connect the battery. Plug the AC adapter into the wall outlet and the laptop. Turn on the ...

It is not drawing enough power from the power brick. This is why the battery is actually draining while connected to AC power but will charge slowly when turned off. It will eventually get worse or stop charging completely. So yes, it is a faulty part in the P53, which is the power delivery on the system board. It is not just P53, I have seen this in many other Lenovo laptops. It is just a ...

That's it. Save the changes and exit from BIOS settings and now you''ll never get the annoying warning message about AC power adapter type at startup. PS: Only use this method if your AC adapter is fine and in working ...

If the battery is healthy and with the adapter not recognized, there are 3 possibilities. The adapter is bad, the DC jack has a bent or missing centre pin, or the motherboard has problems. The motherboard problem would be in the charging circuit so would not affect whether it boots fine and runs Windows properly. The DC jack is available

## **SOLAR** PRO. The power adapter has a battery

The AC power adapter wattage and type cannot be determined. The battery may not charge. The system will adjust the performance to match the power available.". I never had that issue before the repair. My laptop battery is in very poor condition and I am aware of that, but it still used to charge, it would just drain quickly. Now, after the ...

If the battery is healthy and with the adapter not recognized, there are 3 possibilities. The adapter is bad, the DC jack has a bent or missing centre pin, or the ...
