

How can I get solar panels installed on my roof?

Otovo is the easiest way to get solar panels installed on your roof. We are a marketplace that connects you with local, high quality energy installers that we have thoroughly vetted. Our technology analyzes the potential of your home and advises you precisely about the ideal project.

How to install solar panels on a flat roof?

If you have a flat roof, you will need a mounting to install your panels on. When you have a mounting, install it so that your solar panels are tilted at 10 degrees. It is the ideal angle to ensure that your panels are efficient. The angle also ensures that rainwater and dust don't settle on your solar panels when installed flat on the roof.

Can solar panels be installed on metal roofs?

Solar panels can be installed on metal roofs, depending on the type. If you have a standing seam metal roof, your solar installer won't even have to drill holes in your roof, as panel mounts can simply be clamped to the raised seams.

Can solar panels be installed on a wood roof?

Yes, solar panels can be installed on a wood roof; the process involves drilling into a roof stud and slipping flashing in under the wood pieces to prevent leaking.

How do you install solar panels on a shingle roof?

Asphalt shingle roofs, which are the most common roof material, make for straightforward solar panel installations. Installers drill studs into the roof and attach panel mounts at those locations.

What is a good roof angle for solar panels?

In the Northern Hemisphere, a south-facing roof pitched between 30 and 45 degrees is considered ideal for solar panels. Your roof should be in good condition and able to support the additional weight. You should also identify obstructions, such as nearby trees or buildings, that could cast shadows on your panels.

If you're wondering how to install solar panels on a roof and what the process entails, we've created a step-by-step breakdown to give you an idea of how your roof will be modified to accommodate your new system.

Mounting solar panels on a roof without drilling is possible with certain types of mounting systems, such as those that use adhesive or ballast weights to hold the panels in place. However, these systems may not be suitable for all roofs, and may not be as secure or durable as systems that use drilled-in mounting hardware.

Adhesive mounting systems are less durable ...
