

# Western Europe repairs damaged solar panels

Can solar panels be repaired?

Solar panels are all constructed in a similar way. This is a big advantage, as it makes repairs relatively easy. Without much trouble, broken bypass diodes, charred junction boxes, bent or cracked module frames or scratched backsheets from all types of solar panels and manufacturers can be repaired.

Can a broken PV system be restored?

Broken modules can easily and cost-effectively be restored through a repair. When you opt for a repair, you won't change the structure or optics of your PV system. Everything will still be in original form. Repairing the panels can be the most affordable way to restore a PV system. Especially when there are no replacement modules available.

What happens after a solar panel repair?

After a repair, the optics of your system stay the same. Solar panels are all constructed in a similar way. This is a big advantage, as it makes repairs relatively easy.

What is solar panel care?

Call our team now to discuss our solar panel care provision in greater detail. An integral part of your solar panel maintenance agreement is the routine inspection that keeps your system in good working order, identifying any damage or problems and putting solar panel system repairs into effect straight away.

Why do solar panels rust?

Delamination and internal corrosion: If the laminated component of the solar panels comes undone, moisture and air can penetrate the system and cause internal corrosion or rusting. This can affect the wiring and cause all sorts of electrical issues. Thus, rendering your PV system useless.

What are some problems with solar panels?

Component damage - birds or rodents: Birds and other creatures can nest on and around your PV panels and significantly decrease the efficiency of your panels. Consider putting up mesh wires or something to deter pests from the area. Snail trail contamination: Another common problem with solar PV systems is snail trails.

In the case of faulty solar panels, it frequently is the solar cells that get damaged over time - by hot spots or micro-fractures - whereas the panel itself, the lamination, the waterproofing and the frame, might still be intact. Whether repairing panels is worth it, often depends on the specific installation, and on how it was ...
