

What to do if the mobile power supply does not contain batteries

How do I fix a battery not charging on my phone?

Power off your phone and plug in the charger to see if the battery charges. If the battery charges while the device is off, but it stops when you turn it on, restart it in safe mode to rule out any apps that might be causing the issue. This is usually done by simultaneously pressing the power button and the volume up or down button.

How do I troubleshoot a non-charging phone?

The first step in troubleshooting a non-charging phone is to verify the functionality of the power source and the charger. Test the charger on another device to confirm it works, and try plugging it into different outlets to rule out any issues with the power supply.

What should I do if my phone won't charge?

Go ahead and put it through the paces if your phone won't charge. Inspect it for any obvious damage. Cracks or bent outlets are instant red flags. Likewise, try using it with other devices and switching it with another brick to see if this is the problem. Here's our list of the best wall chargers to find a good alternative to your damaged one.
