

Why should you use a lifting tool for batteries?

With a lifting tool for batteries, you can easily move the batteries in a safe, smooth and time-efficient way. Instead of needing several people to help, the operator can now perform the lift on his own. Batteries weigh between 7-15 kg. It is a physical strain to lift them manually, several times a day.

How does a battery lift work?

Instead of needing several people to help, the operator can now perform the lift on his own. Batteries weigh between 7-15 kg. It is a physical strain to lift them manually, several times a day. This lifting solution for batteries leads to fewer, or no, repetitive lifting that can lead to wear and tear on your body.

How do you keep a car battery from losing power?

If you're pulling a good battery out of your car while you do some other work (mechanical or perhaps a restoration) or for long-term storage, find a safe place in your garage for the battery to sit and connect it to a trickle charger. That will slowly add to your battery's charge and keep it from losing its power slowly over time.

How to choose a car battery lifter?

When choosing a car battery lifter, consider the following factors to ensure you get a product that effectively carries a battery without damaging it or spilling acid. The first factor is the brand and reviews. A reputable brand and positive customer feedback can increase confidence in the product's quality and functionality.

How do you handle a car battery?

We've got some tips on handling a car battery. 1. Safety First Even if you think the battery is dead, always treat it as though it's charged. A shock can be nasty -- even fatal. And that warning sticker that says "DANGER -- EXPLOSIVE GASES"? Yeah, that's a real thing, one you have to be very aware of when handling a car battery. 2. Go Negative

How should I carry a car battery?

The most efficient and best-recommended way to carry a car battery is by using a car battery lifter or a carrier. The handles are not designed to support the weight for a long time, and carrying it on your shoulder or near your chest can result in acid spilling, which could burn your clothes and skin.
