

When should you install solar panels?

If you don't mind longer wait times and slightly higher installation fees and prefer to start bankrolling solar credits right away, you'll want to install solar panels during the summer. But if you're looking for shorter installation times and lower fees, you should wait for the spring or fall.

When is the best time to install a solar energy system?

Solar companies are most busy during the height of summer, pushing more ads and doing the most installations and repairs during this time. As a result, you may wait several weeks before your solar energy system can be installed, even longer in high-traffic states like California, Texas, or Arizona.

When should you start stockpiling solar panels?

By installing solar panels in the spring or at the beginning of summer, you can begin stockpiling solar credits early to offset the coming winter months. The Federal Investment Tax Credit (ITC), state tax incentive, and tax rebate programs have rollover and cut-off dates, most of which occur at the end of the year.

Should you install solar panels on your home?

Solar panels are becoming increasingly popular, and for good reason! They save you money on your electric bills, make you more resilient in the face of rising energy costs, and reduce carbon emissions. If you're thinking about installing solar panels on your home, you probably have a lot of questions.

How long does it take to install a solar panel?

The actual solar panel installation can take just a few hours - but the entire process of going solar can take between two and six months to complete. Typically, permitting and inspections are the longest parts of the solar installation timeline.

Should you install solar in the fall?

Fall has many of the same benefits as spring, such as cooler temperatures, less expensive installation fees, and lower wait times. Fall installations typically have a faster turnaround time than spring and summer, as fewer homeowners invest in solar during this season.

Did you know that there is no best time to install solar panels? You can install it at any point during the year. Many homeowners hesitate to pull the trigger because they think it's only possible to go solar during the summer ...
